technical seminars

Highland Tank[®]

Continuing Education

Professional engineers in most states have requirements to maintain their licenses.

Highland Tank has developed an approved series of technical seminars to help engineers meet requirements for licensure and continuing education.

Topics include:

- Petroleum & Chemical Storage Tanks
- Wastewater Treatment Systems
- Grease Removal Systems
- Rainwater Harvesting Systems & Greywater Systems
- Thermal Energy Storage Tanks

We can also tailor a seminar to your specific needs. Each seminar provides one (1) New York State Professional Development Hour. If you are unsure of your state's requirements, please contact us, we'll be glad to assist you.

water storage & treatment systems

Highlights of this seminar include water resources and protection, rainwater harvesting methods, supply estimation, system components, operational requirements and maintenance.

Highland Tank provides HighDRO® Water Tanks and Systems to support your LEED initiatives.

- HighDRO® Rainwater Harvesting Systems
- HighDRO® Greywater Recycling Systems
- HighDRO® Storage Tanks for fire protection, potable water, stormwater detention, wastewater and thermal energy storage
- ASME Pressure Vessels

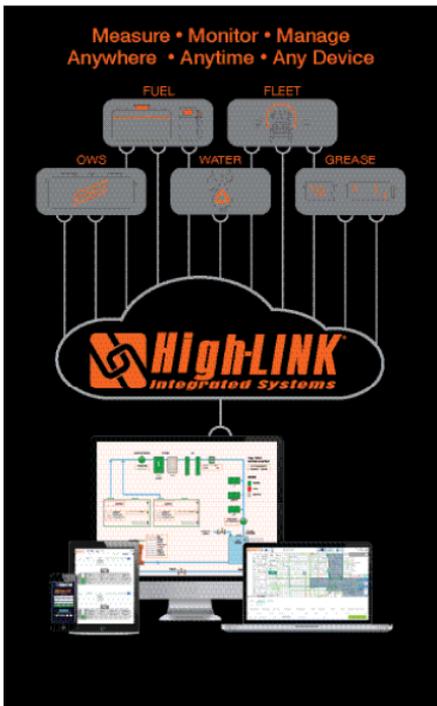

high-LINK® integrated systems

High-LINK® Integrated Systems provide a multitude of monitoring capabilities that are customized for every site.

Monitoring trends, benchmarks, and actionable data allows business owners and operators to make informed decisions and maximize the life cycle of equipment.

- Fuels systems
- Wastewater treatment & filtration systems
- Rain or stormwater process & reuse systems
- Fats, oil, grease, & solids (FOGS) management
- Fleet vehicle monitoring

overview

Highland Tank's Lunch & Learn seminars are designed to promote a better understanding of current federal, state and municipal regulations that affect commercial, municipal and industrial facilities. Many of these facilities require Storage Tanks, Oil/Water Separators, Hydrocarbon Filtration Systems, Grease Interceptors and Water Storage Tanks.

Our seminars are designed to aid engineers, consultants, spec writers, owners and operators of the targeted facilities.

The seminar will provide the latest information on the equipment available, material specifications, installation and operation techniques for safe storage and handling of hazardous materials as well as treatment and reuse of the facility's wastewater prior to discharge.

Some topics covered in each seminar include; Current EPA Regulations, SPCC, NPDES Phase I and II, Sewer Pretreatment, Fire Codes & Regulations, and LEED requirements.

These seminars are applicable across a broad range of of industries including:

- Commercial & institutional
- Data centers & communication
- Environmental
- Government/military/municipal
- Manufacturing & industrial
- Oil& gas
- Petroleum marketing
- Plumbing & water
- Power & utilities
- Transportation

The speakers and presenters are certified representatives from Highland Tank.

In preparation for your seminar, please visit our website, www.highlandtank.com, for brochures catalogs, drawings and written specifications for your products of interest.

To sign up for a Lunch & Learn, visit www.highlandtank.com/lunch-and-learn.

petroleum & chemical storage tanks

This seminar deals with regulations and requirements related to the following storage tank installations:

- Heating Oil - Commercial & Residential
- Back-up Diesel/Electric Generators
- Municipal and privately owned non-commercial motor vehicle fueling sites
- Bulk Plants
- Aviation Fuel, Chemicals and Lube Oil
- LPG for all types of installation including Autogas, bulk storage and heating

Our trained staff is knowledgeable of steel storage tanks, storage tank regulations and technical specifications for aboveground and underground tank systems.

Highland Tank has been manufacturing high-quality liquid storage tanks for decades and has the knowledge and experience to provide cost-effective, innovative solutions for your projects.

wastewater treatment systems

Stormwater discharges at industrial facilities, such as transportation and petroleum marketing, may be affected by the NPDES Regulations and require an SPCC plan.

This seminar addresses how oil/water separators help these industrial sites meet the established oil discharge limitations under federal laws, highlighting the latest advancements in oil separation and waste water treatment technology.

- Oil/water separators that employ Highland's patented Corella® Coalescer technology
- Advanced Filtration Systems for secondary treatment of hydrocarbon contaminated water
- Oil/solids interceptors for compliance with strict sewer pretreatment regulations

grease removal systems

Pretreatment regulations for fats, oils, grease and food solids, affect all types of food processing facilities as well as commercial and institutional kitchens.

This seminar provides an overview of plumbing codes and interceptor sizing to help comply with those regulations.

Highland Tank manufactures the most extensive line of grease removal systems to treat FOG including:

- Grease Recovery Units
- Gravity Grease Interceptors
- Hydromechanical Grease Interceptors
- Strainer Baskets
- Solids Removal Systems
